

Statewide Auto-DR Planning Meeting

Lawrence Berkeley National Laboratory Akua Controls C&C Building Automation Global Energy Partners

Demand Response Research Center

November 13, 2006

Research and Project Sponsors

- California Energy Commission PIER Program
- Pacific Gas and Electric
- San Diego Gas and Electric

Presentation Overview

- 10:00 10:15
- 10:15 10:30
- 10:30 11:30
- 11:30 12:30
- 12:30 1:00
- 1:00 1:30 Southern
- 1:30 2:00
- 2:00 3:00
- 3: 00

Welcome and Introductions Meeting Goals and Objectives AutoDR Project Background 2007 PG&E Program Design Lunch (Provided) Discussion on 2007 Programs for California Future Directions/PIER Activities Next Steps Meeting Adjourn

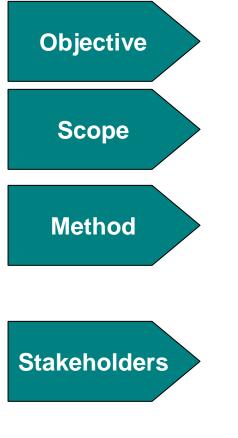

Meeting Goals and Objectives

- Provide overview of AutoDR technology, field tests, and program results
- Assist in AutoDR Implementation Plans
- Discuss AutoDR commercialization strategies
- Obtain feedback on research plans/priorities

DR Research Center

to develop, prioritize, conduct, and disseminate <u>multi-institutional</u> research to facilitate DR

technologies, policies, programs, strategies and practices, emphasizing a market connection

Partners Planning Committee, Annual R&D Plan

- **Gamma** State Policy Makers
- □ Researchers
- Information and Metering System Developers
- □ Aggregators
- Program Implementers

- Utilities
- Industry Trade
- Associations
- Building Owners / Operators
- Building Equipment Manufacturers
- End-Use customers

AutoDR Project Background

- Goals
 - Develop a low-cost, fully automated infrastructure to improve DR capability in California
 - Evaluate "readiness" of (commercial) buildings and industrial facilities to receive common signals
 - Evaluate capability of control shed strategies and measurement of sheds to improve future buildings

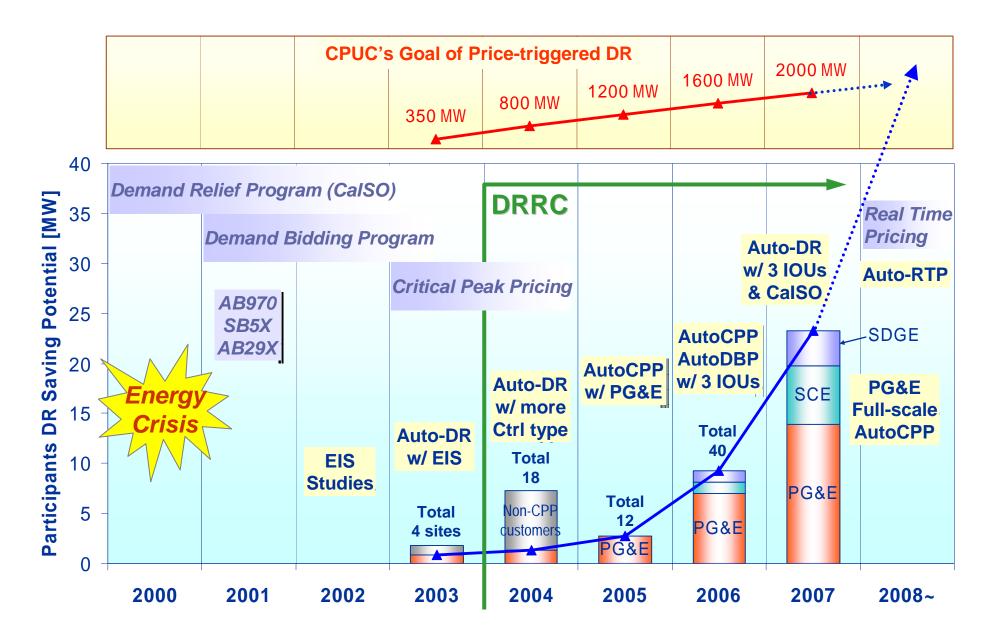

AutoDR Multi-Year Summary

- Develop Demand Response Automation Server (annually updated)
- Develop connection to Energy Management Control Systems (EMCS)
- □ Field Tests Recruit sites/ 2 to 12 events per summer
 - 2003 5 sites Internet link to Energy Information Systems (EIS)
 - 2004 18 sites linked to EIS and EMCS
 - 2005 PG&E CPP collaboration
 - 2006 PG&E, SDG&E, Planning with SCE
- Evaluate with weather normalized baseline (data from Interact)
- Interview site after each event

	# Sites	DRAS	Site Communications	Utility
2003	5	Infotility	XML Gateway Software	None
2004	18	Infotility	XML - Internet Relay	None
2005	11	Akua	XML - Internet Relay	PG&E
2006	25	Akua	XML - Internet Relay - CLIR	PG&E, SDG&E
2007	200?	Akua	XML - Internet Relay - CLIR	Statewide

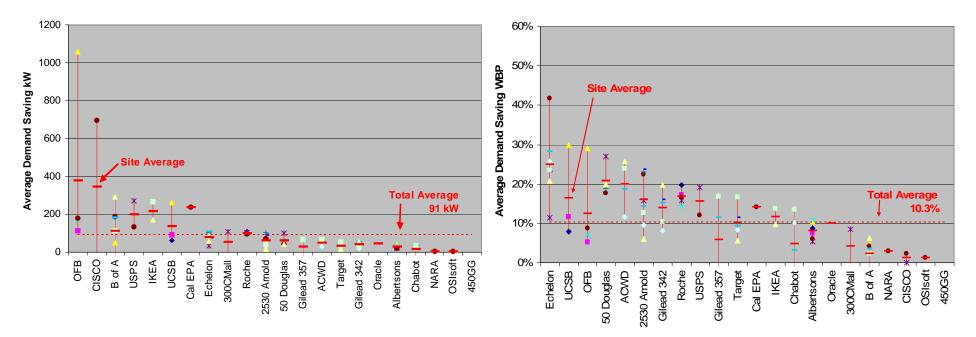

Results by Site (2003-2005)

□ 22 sites evaluated over 3 years (pre-2006)

□ Multiple building types, control strategies, and climates

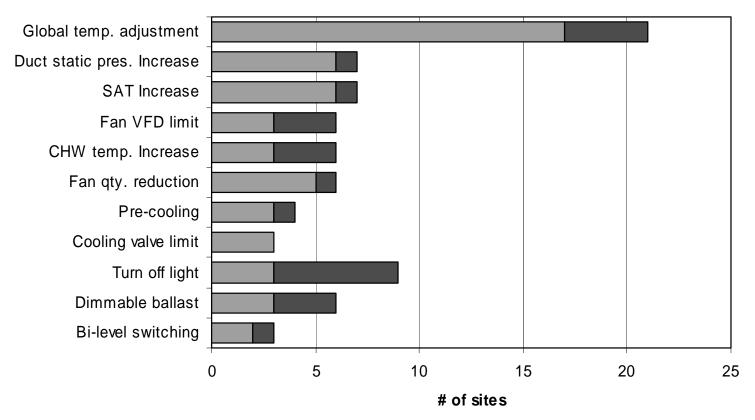

- Avg savings: 10% (3 hr event, 22 sites, 13 events); avg 15-min max: 19 %
- Avg savings: 91 kW, avg max of 170
- Avg savings: 0.5 W/sqft, avg max of 0.9 W/sqft

Strategies and Factors Influencing Savings

■ Fully-Automated ■ Manual or Semi-Automated

Building factors	System factors	Strategy factors	Weather factors
 Building use 	 HVAC type 	 Depth of control 	 Outside Temp
 Building size 	 Efficiency 	 Area% controlled 	 Humidity
 Structure type 	 Control type 	 Curtailment duration 	 Solar radiation
 Occupancy 	 Commissioning

2006 Auto-CPP Procedures

- 1. Develop Program (Done by PG&E and LBNL)
 - Site Requirements/Basic Procedure Automate CPP
- 2. Recruit Sites (LBNL and PG&E)
- 3. Communications Systems Development (LBNL and Akua)
 - CLIR Box Development
 - Develop and Host DRAS
 - LBNL and Akua developed and implemented at Co-Lo
- 4. Implement/Configure Communications (LBNL and Tech Coordinator)
 - Technical assistance to connect site EMCS to DRAS
 - Technical assistance selecting & implementing shed strategies
 - Apply for \$100/kW Technology Incentives (SLOW PROCESS)
 - Shed event testing
 - Optimization and troubleshooting

5. Run Program/Evaluate Results (LBNL)

- Post event shed "problem" interview
- Weekly emailed newsletter
- Post event shed data analysis
- Multiple baselines evaluated, Feedback provided to sites
- Evaluate individual and aggregated sheds

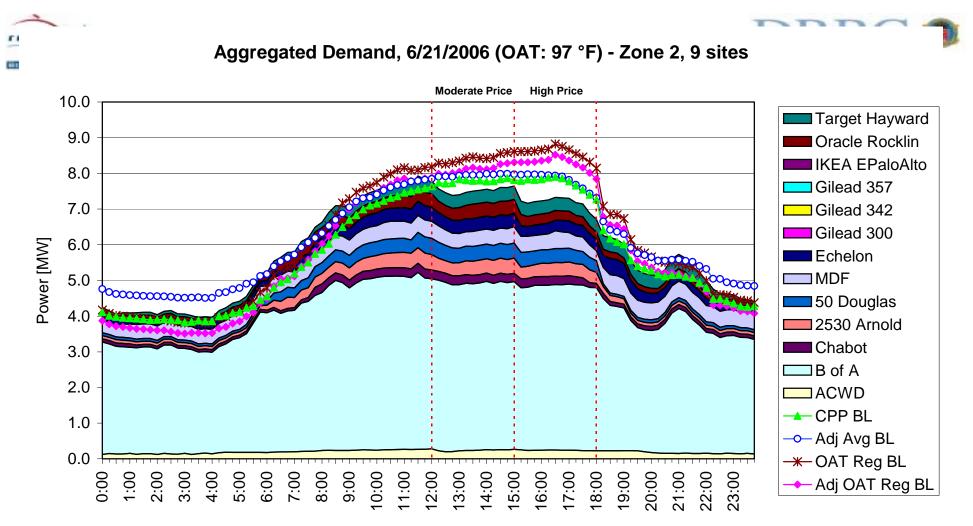

Preliminary results of LBNL / PG&E Auto-CPP Summer 2006

(High Price Period, 3 – 6 PM)

Oracle Rocklin	91	180	23%	34%	11	\$ 1,875	\$ 21	\$ 10
Target Hayward	65	107	16%	24%	11	\$ 3,312	\$51	\$ 31
Total / Avg	1105	2540	14%	32%	130	\$ 5,045	<u>\$51</u>	<u>\$ 26</u>

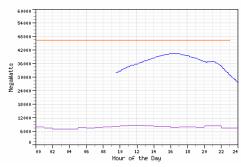

This data is based on previous 20 non-event business days OAT regression baseline model result. Morning adjustment (shift up baseline to match morning load 3 hours prior to DR operation) is applied to all sites except Museum, where applied precooling strategy. The aggregated average is calculated as { Σ (% saving)}/n. (NM, 11/06/2006)

Feedback from Facility Managers

Site	Comfort Issues
ACWD	Some complaints of high temperature but company found innovative ways to reduce complaints. Manual pre-cooling in some zones.
B of A	Some comfort concerns
Chabot	Too cool in the morning, hot in the afternoon
Contra Costa	Occupants realized it is not getting cooler in the afternoon but no complaints
Oracle	Comfort complaints so plan to implement pre-cooling , more gradual temperature changes and changes in programming to exclude corner offices with double sun exposure
Sybase	People did not like lighting reduction and some turned zones back on as CPP days continued. (manual DR)
Site	Program/Tariff Issues
ACWD	Surprised by high utility bill.
B of A	DR savings too small
Contra Costa	DR savings too small for hassle they have endure
Echelon	DR savings too small. Realized need to refine DR strategies to avoid demand charges.
IKEA, Gile	ad and Target worked fine – no complaints or issues report.

What is AutoDR?

- Enabling technology & processes
- Can automate any DR program
- Facility managers are notified, but not required for automated sheds to occur.
- Defines standard interfaces for many parties to use.
 - Individual Sites
 - Multi-Site Energy Managers
 - Aggregators
 - EMCS Companies
- Reliable, Secure, Scalable, Open

What is <u>NOT</u> AutoDR?

- Doesn't change decision making processes within utility
- Doesn't compete with aggregators (lowers their costs)

AutoDR Technical Developments 2003 – present

- AutoDR was created as part of the DRRC effort to remove impediments to DR in commercial facilities. Cost effectiveness, process development & scalability were overriding principals.
- **Barrier: HVAC strategies complicated and ineffective**
- **Solution:** Global Temperature Adjustment (GTA) strategy.
 - Slated for Title 24 code in 2008.
 - Enable DR in commercial building at no additional cost.
 - Proven to be simple, effective & minimally objectionable
- **Barrier:** Too labor intensive
- Solution: Automated DR with pre-planned strategies

AutoDR Technical Developments 2003 – present

- Barrier: Auto-DR signal transmission infrastructure too expensive.
- Solution: DRAS leverages existing Internet and WAN connections in commercial buildings.
- **Barrier:** Internet signals not standardized
- Solution: DRRC is working with CA PCT, NIST and BACnet toward signal standardization

AutoDR Technical Developments 2003 – present

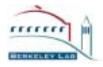

- Barrier: Internet signals and protocols too complicated to transfer into existing EMCS
- Solution: Internet relays are easily read by all existing EMCS.
 - Can be used for direct load control as well
- Barrier: Internet relays are difficult to configure and are inherently insecure.
- Solution: DRRC developed self configuring, secure Internet relay device; CLIR Box (Client, Logic, w/ Integrated Relay).
 - Prototyped in 2005

Background: DR Automation Server ver. 1

- Used in 2003 & 2004 Auto-DR Tests
- Served research needs
- No formal design process was used
- Limitations became apparent in 2004
 - Not flexible
 - Not scalable
 - High latency
 - Not reliable

DR Automation Server ver. 2 & 3

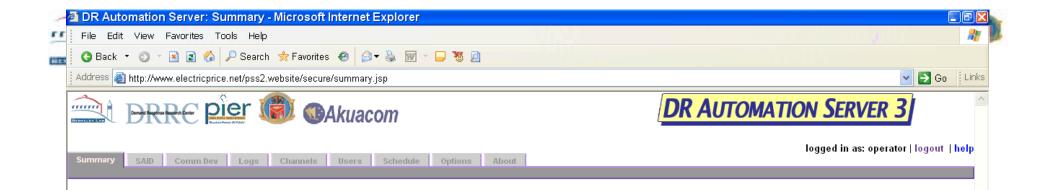

- Used in the PG&E / LBNL pilots in 2005 & 2006
- Financial transactions based on the functionality
- Needed to meet IT industry standards for
 - Flexibility variety of Auto-DR programs
 - High availability/reliability Specified Goal: 99.99%
 - Scalability 100,000 +
 - Security A security breech could become a major public relationship setback to the industry.

Web Browser Interface to DR Automation Server (DRAS)

What does it look like?

AutoDR 2006 Task Chronology 2 MW (13 sites) Figure Version 9-20-06

Performed by LBNL in 2006

Tech Coord.

Performed by LBNL and C&C Automation in 2006

Recruiters: Provide focused effort to secure sales targets. Must be able to convince senior property management to sign-up for AutoDR Time program(s). Need some technical knowledge but more importantly, Program Manger (LBNL): Provides marketing strategies, must be motivated to successfully close deals. Works in concert with collateral material, subcontractor IOU account rep. to the degree that they require. Gets leads from management. Responsible for utility and other sources. Two LBNL recruiters started late and \mathbf{r} brought on less than 5 new sites in 2006. meeting overall project goals. Recruitment IOU Account Manager: "Owns" customer Program relationship. Assists LBNL recruiter with Phase Mngr. Recruiter IOU Acct. providing leads, internal IOU paperwork etc. 5x Mngr. However, AutoDR is not the primary focus of 10x their job. Sr. Owner's Rep: Decision maker for energy Trade orgs Sr. Owner EMCS purchases. Owner's reps with decision-& other Rep. installed base making power for multiple sites should be Time targeted 5X? Contract Program Mngr. $\mathbf{1}$ Tech 5x Strategy Definition Phase Coord. 20x Tech Coordinators must be able to support technical aspects of "connecting" sites to the DRAS. They assist the site facility mngr Facility Manager: Day to day operations at in directing the local EMCS contractor to perform necessary Facility the site. Works w/ tech coord to define upgrades. Tech coordinators evaluate sites for "ease of strategies. Lets subcontracts to EMCS Mngr. AutoDR" and help suggest shed strategies. They also contractor and IT implementers. coordinate with the site IT mngr. to hook-up the CLIR box or XML software gateway. LBNL and C&C in 2006 Time Spec for EMCS Implementaion Phase $\mathbf{1}$ Program Mngr. Tech Facility Coord. Mngr. DRAS EMCS **IT Manager** Manager Contractor **EMCS Contractors** – Install CLIR boxes, perform "hands-on" programming DRAS Manager - Assign passwords to IT Manager - Typically & other upgrades to implement DR new DRAS accounts. Connect to proper on-site personnel and Strategies at the site. Typically, EMCS automation channel etc. LBNL in 2006 their network Contractor with existing relationship with implementers (cable to owner and site must be used. Payment CLIR box etc.) via site owner using TI funds.

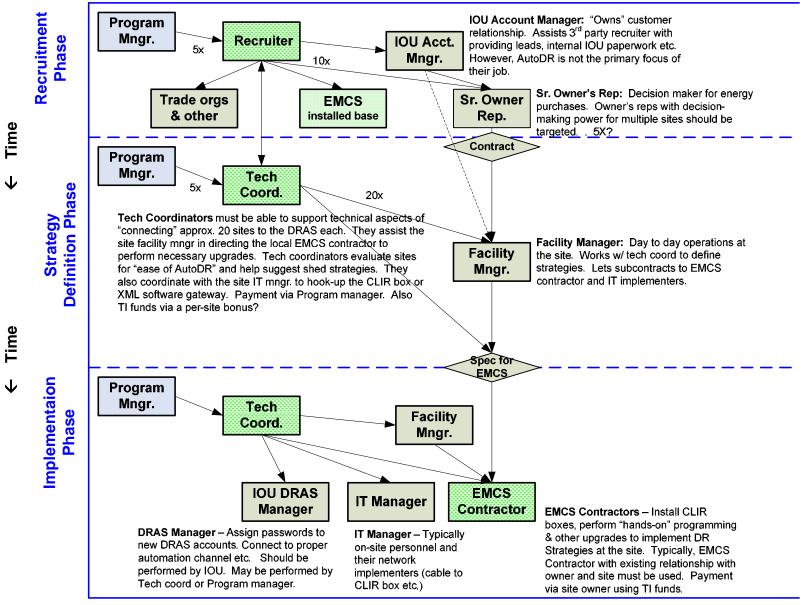

Program Manger (3rd Party): Provides marketing strategies, management. Responsible for meeting overall project goals.

Recruiters: Provide focused effort to secure sales targets. Must be able to convince senior property management to sign-up for AutoDR program(s). Need some technical knowledge but more importantly, must be motivated to successfully close deals. Works in concert with collateral material subcontractor IOU account rep. to the degree that they require. Gets leads from utility and other sources. Each recruiter must contact about 100 sites and close about 20 deals.

15 MW (~ 200 sites)

AutoDR Implementation 2007

- Ready for deployment
- Technology
 - Effective
 - Secure
 - Reliable
- Processes
 - Well defined
 - Scalable
- Standard Interfaces
- Designed for flexibility
 - Multiple programs
 - Multiple user types

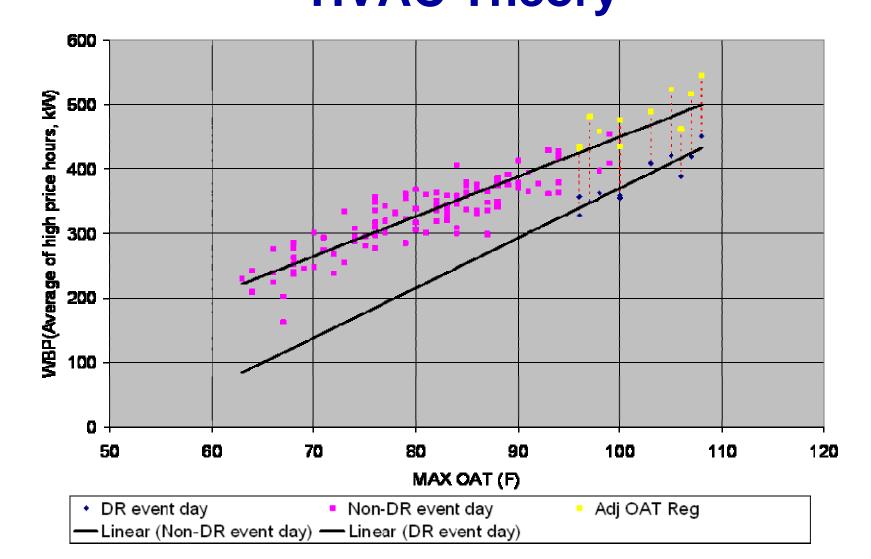

Future Directions/PIER Activities

Research Topics

- Analysis of sheds by building type, enduse, market segment, climate
- DR shed prediction tools and guides
- Improving links between efficiency and DR
- Economic analysis
- DR Automation System enhancements
 - Retail Chains, property managers etc. would like a statewide view the DR status of all of their stores

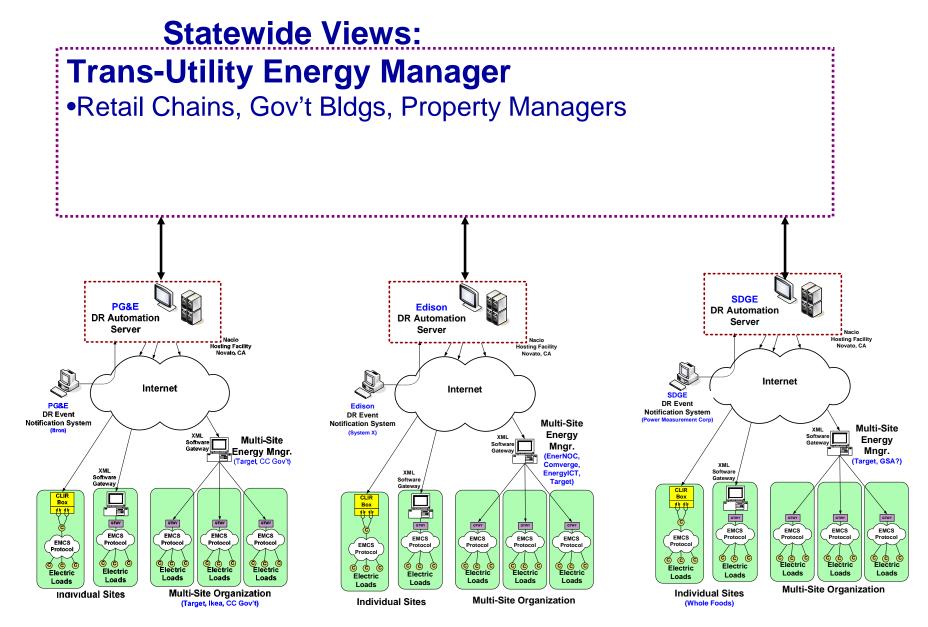

Research for 2007

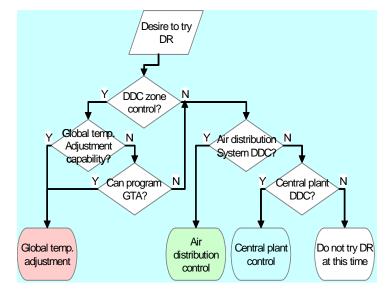

Linking DR and Energy Efficiency

Ideal start - good commissioning, retro-commissioning, advanced/new controls

- HVAC Direct digital control (DDC) global temperature adjustment
 - In process for Title 24 2008
 - Closed loop
- Lighting Continuum Zone Switching, Fixture Switching, Lamp Switching, Stepped Dimming, Continuous Dimming
- Maybe you "can" use a strategy every day?

Best Practices in New Construction

- Objective Embed DR strategies in advanced controls
- New York Times Building designed for efficiency simulated to develop DR strategies
 - Efficient features: Integrated movable, Shading & dimming, Under floor air systems
 - Commissioning in mockup
- Demand Response Strategies
 - Dimming lights beyond daylighting,
 - Reset zone temperatures (gradient)
 - Reduce perimeter fan speed

Predicted Annual Savings from 400 kW Shed

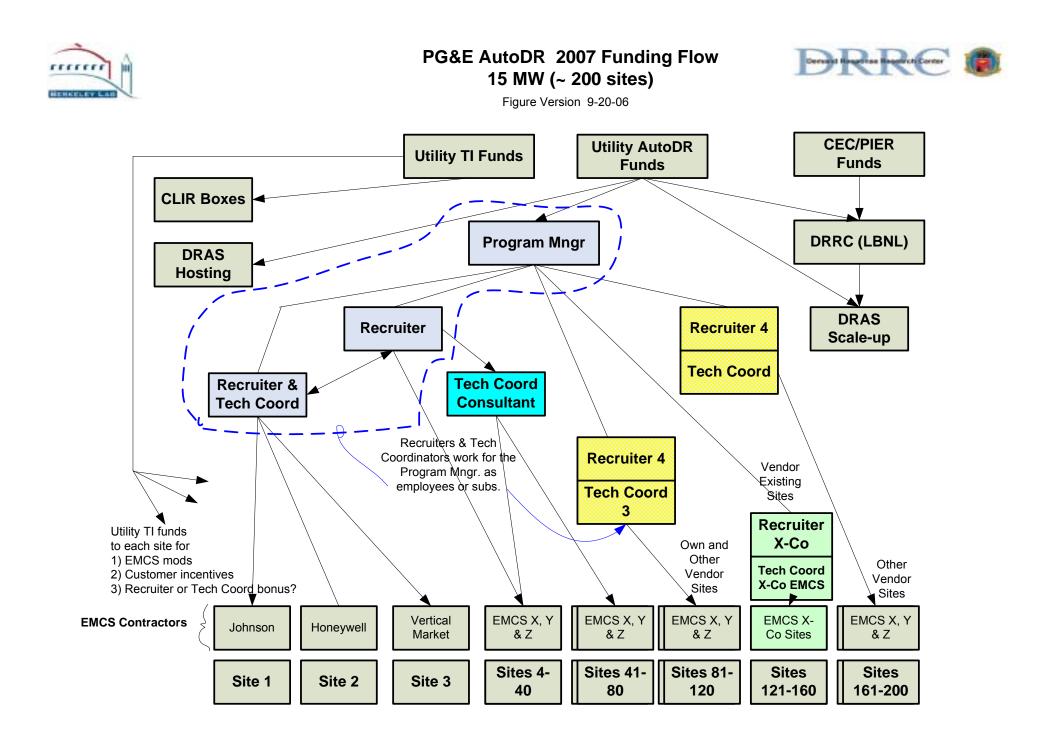

Program	Predicted Annual Savings*
Independent Capacity Program	\$17,632.00
Emergency DR Program	\$1,440.00
Distribution Load Relief Program	\$1,600.00

Questions??? Comments???

Automated DR Definition

- Automated Demand Response for commercial and industrial facilities can be defined as fully automated DR initiated by a signal from a utility or other appropriate entity and provide full automated connectivity to customer end-use control strategies.
- **Signaling** The AutoDR technology should provide continuous, secure, reliable, two-way communication with end-use customers to allow end-use sites to be identified as listening and acknowledging receipt of DR signals.
- **Industry Standards** Automated DR consists of open, interoperable industry standard control and communications technologies designed to integrate with both common energy management and control systems and other end-use devices that can receive a dry contact relay or similar signals (such as internet based XML).
- **Timing of Notification** Day ahead and day of signals are provided by AutoDR technologies to facilitate a diverse set of end-use strategies such as pre-cooling for "day ahead" notification, or near real-time communications to automation "day of" control strategies. Timing of DR automation server (DRAS) communications must consider day ahead events that include weekends and holidays.
